MP-6117 Real Time Operating Systems, August 2021

- Algorithms
- Rate Monotonic
- 3 Earliest Deadline First
- 4 Least Laxity First

- Algorithms
- 2 Rate Monotonic
- 3 Earliest Deadline First
- 4 Least Laxity First

## Algorithms

In this project, we will study the following real time scheduling algorithms:

- Rate Monotonic (RM)
- Earliest Deadline First (EDF)
- Least Laxity First (LLF)

## Rate Monotonic (RM)

#### General Description:

Rate monotonic is a priority assignment algorithm used in real-time operating systems with a static-priority scheduling class. The static priorities are assigned according to the cycle duration of the job, so a shorter cycle duration results in a higher job priority.

# Rate Monotonic (RM)

### Schedulability Test:

$$\prod_{i=0}^{n} \left( \frac{E_i}{P_i} + 1 \right) \le 2 \tag{1}$$

- E<sub>i</sub>: execution time of the task i.
- $P_i$ : period of the task i.

## Earliest Deadline First (EDF)

### General Description:

Earliest Deadline First is a dynamic priority scheduling algorithm used in real-time operating systems to place processes in a priority queue.

Whenever a scheduling event occurs the queue will be searched for the process closest to its deadline. This process is the next to be scheduled for execution.

## Earliest Deadline First (**EDF**)

### Schedulability Test:

$$\sum_{i=0}^{n} \left( \frac{E_i}{P_i} \right) \le 1 \tag{2}$$

- E<sub>i</sub>: execution time of the task i.
- $P_i$ : period of the task i.

# Least Laxity First (**LLF**)

#### General Description:

Least Laxity First is a job level dynamic priority scheduling algorithm. It means that every instant is a scheduling event because laxity of each task changes on every instant of time. A task which has least laxity at an instant, it will have higher priority than others at this instant. Laxity is mathematically it is described as

$$L_i = D_i - (t_i + C_i^r) \tag{3}$$

- D<sub>i</sub>: next deadline of the task at t<sub>i</sub>.
- t<sub>i</sub>: current execution time.
- $C_i^r$ : remaining computer time of the task at  $t_i$ .

# Least Laxity First (LLF)

### Schedulability Test:

**TODO**: Missing equations

- Algorithms
- Rate Monotonic
- Earliest Deadline First
- 4 Least Laxity First

## Schedulability Tests

| Task ID | Execution Time | Period |
|---------|----------------|--------|
| 1       | 1              | 6      |
| 2       | 2              | 9      |
| 3       | 6              | 18     |

$$\prod_{i=0}^{n} \left( \frac{E_i}{P_i} + 1 \right) \le 2 \to 1,901235 \le 2 \tag{4}$$

Passed

### Execution
